

NG Nordic Asset Management Solution

Solution for efficient, safe and profitable power plant maintenance

The NG Nordic Asset and Maintenance Management Solution is created specifically for power plants with a long and solid expertise in energy assets, asset management and asset maintenance. It offers all the tools needed in power plant maintenance as well as tools for distribution network and district heating pipeline maintenance.

NG Nordic Asset Management Solution contains applications for:

- Maintenance planning, monitoring and reporting
- Process isolations and permit to work system
- Outage management
- Spare part and inventory management
- Purchasing and invoice handling

The asset management solution is powered by IBM Maximo with own value-adding components. NG Nordic (formerly Fortum Recycling & Waste) is an IBM partner and has delivered system implementation projects at dozens of power plants in Finland and abroad. NG Nordic asset management solution is highly customisable to meet specific asset management requirements of your company.

Key benefits of the Asset and Maintenance Management System:

- Power plant's availability improvement
- Outage time optimization
- Lowering of maintenance and repair costs
- Enhancement of plant and work safety
- Improvement to employee's quality of work due to good planning
- Enables the managers to monitor and manage the workflow
- Improved communications
