

# Solvo® DesignPlus

## Boost the boiler design

**Solvo® DesignPlus software enables efficient power plant and boiler design.** Plan and optimise boiler renovations with confidence. Solvo DesignPlus provides reliable and efficient tools to support your entire design process — from planning detailed boiler renovations to evaluating and comparing plant concepts. Accelerate your design work, explore alternative solutions, and translate technical differences into monetary value — all to ensure customer satisfaction and optimal outcomes.

Smarter boiler design. Better results.

### WHAT IS SOLVO DESIGNPLUS?

Solvo DesignPlus is Finland's leading design tool for boilers and thermal power plant processes.

It builds on the capabilities of Solvo Design, offering extended functionality tailored for boiler professionals.

The tool of choice for:

- Thermal power plant modelling
- Boiler renovation planning
- Detailed process and concept optimisation

### WHO IS SOLVO DESIGN FOR?

- Boiler design and power plant professionals
- Engineering and consulting companies – even for demanding projects

Discover the new features of version 6.0 with a brand new graphical user interface!

### HOW COULD YOU BENEFIT?

- Speed up boiler and process design
- Calculate and compare design alternatives with ease
- Utilise boiler-specific standards and reference temperatures
- Impress clients with clear and illustrative results
- Stay ahead of your competitors
- Customise the software to your customer's unique needs

### ADVANCED TOOL FOR PRECISE BOILER AND PROCESS DESIGN

- Continuously evolving software with expert support
- Get started quickly with tailored one-day training
- Comprehensive support to ensure your success
