

Solvo® Diagnostics

An efficient process analysis tool for thermal processes

Solvo® Diagnostics enhances your process monitoring with a fast and user-friendly diagnostics tool. The browser-based interface makes it easy to share across your organisation. Visualise. Analyse. Communicate.

WHAT IS SOLVO DIAGNOSTICS?

Solvo Diagnostics is a modern process display that shows your plant's full process at a glance – including both measured and calculated values for complete mass and energy balances.

- Based on the Solvo Online model
- Reads data from the same database
- Includes customisable report templates and graphs
- Time-series filtering and data exploration tools
- Share process views as links or images with colleagues

WHO IS SOLVO DIAGNOSTICS FOR?

- Power plant operators and engineers
- O&M and production personnel
- Any team needing rapid process insight

HOW COULD YOU BENEFIT?

- Save time with the fast and easy-to-use process diagnostics tool
- Check mass and energy balances - total and equipment related
- Gain deeper insight into your process – see both measured and calculated variables
- Utilise the ready-made reports or customise your own
- Improve reporting with ad hoc variables, formulas and steam/water functions
- The browser-based tool is easy to share with personnel

VERSATILE TOOL FOR PROCESS DIAGNOSTICS

- Continuously developed and field-proven
- 3-hour tailored training to get you started
- Comprehensive customer support will ensure your success.
